ABOUT ME

Final-year Artificial Intelligence major at UEF, seeking a Computer Vision Engineer Internship focused on model deployment and edge computing. Proven track record in building real-time vision-driven automation systems with ultra-low latency (15-30ms) using Python and OpenCV. Successfully led an R&D project deploying YOLOv8 object detection models for mobile environments. Adept at solving complex client-side integration challenges using C++ injection and multi-process architectures. Highly passionate about model optimization pipelines (ONNX, TFLite, INT8 Quantization) and integrating robust perception stacks into resource-constrained hardware.

EDUCATION

2023 – Present	Bachelor of IT (Artificial Intelligence)
UEF University	Coursework explicitly emphasizes Computer Vision, Deep Learning, real-time image processing, and building scalable, deployable AI software.

EXPERIENCE

Oct 2025 – Jun 2026	Computer Vision Automation Engineer
AutoLastWar Ecosystem	Engineered a vision-driven automation product at scale, serving 286+ registered accounts with stable feedback loops. Designed a closed-loop perception stack utilizing Python, OpenCV, and MSS (Grayscale pipeline, auto-DPI calibration, Template Matching, ROI extraction) achieving 15–30 ms per inference cycle. Developed a multi-process architecture over JSON-line socket IPC. Built a C++ bridge (version.dll) for Lua injection into the game client, and utilized Nuitka for secure native builds.
Sep 2025 – Apr 2026	Computer Vision Team Lead (Divine Farmer's Eye)
Scientific R&D Project	Directed a 3-person team to construct a YOLOv8-based crop disease diagnosis AI, successfully passing the scientific product review round. Processed complex, noisy field data and refined the deep learning architecture for mobile-oriented packaging. Applied model conversion (ONNX, TFLite) and quantization techniques to guarantee reliable FPS and low memory footprint on edge devices.

SKILLS

- | | | |
|----------------------------|--------------------------------|--------------------------|
| • Python & C++ | • OpenCV, Image Processing | • Edge AI (ONNX, TFLite) |
| • YOLOv8, Object Detection | • Multi-processing & Inference | • Git & AI Tooling |

CERTIFICATIONS

Machine Learning with Python
Issued by: Coursera (IBM)

Artificial Intelligence on Microsoft Azure
Issued by: Coursera (Microsoft)

Python for Everybody
Issued by: Coursera (Michigan)
